**Birdair, Inc. Completes Work on Dallas Cowboys Stadium Roofing System**

*– Preview the World’s Longest and Largest Retractable Roof on the Science Channel’s “Build it Bigger”–*

**BUFFALO, NY...** Birdair, Inc., the leading specialty contractor of lightweight long-span roofing systems and tensile structures throughout the world, has completed its role as roofing subcontractor for the new Dallas Cowboys Stadium’s tensioned membrane retractable roofing system.

While the facility will not be open to the public until June 6, 2009, the Science Channel will showcase the new three million square-foot NFL venue on its hit show “Build it Bigger,” airing Monday, April 20, 2009 at 10 p.m. (EDT). “Build it Bigger,” hosted by professional architect Danny Forster, will put viewers at the center of the project, highlighting the manufacturing and fabrication of building materials and the multifaceted, meticulous process of assembling those materials into one complete structure.

The Dallas Cowboys Stadium is setting a precedent in architectural design and construction. It features an exemplary seating capacity to accommodate 80,000 people, as well as the largest, longest and steepest retractable roof ever constructed, the largest operable glass door in the world, and two spectacular 180 foot HD video screens.

Birdair served as roofing subcontractor for the project, supplying and installing the structure’s PTFE fiberglass membrane retractable roofing panels coated with TiO<sub>2</sub>, as well as providing clamping for the retractable roofing system.

In addition to Birdair, the project team includes architect HKS, Inc., engineer Walter P. Moore, and general contractor Manhattan Construction. The facility owner is the Dallas Cowboys Football Club.

To date, Birdair has completed work on more than 65 sports facilities globally. Birdair combines breakthrough technologies with unparalleled experience to create structures that meet both facility and patron requirements. Learn more at [www.birdair.com](http://www.birdair.com).

**About Birdair:** Birdair, Inc. is the leading specialty contractor of lightweight long-span roofing systems and tensile structures throughout the world, providing design-build solutions for architects and clients in all aspects of project design, engineering, installation and maintenance. Lightweight long-span roofing systems and cable structures can be attached to any building envelope and offer aesthetic and functional options to complement any exterior design. Birdair, based in Buffalo, NY, is a member of the Taiyo Kogyo Group, with operations serving North and South America and other international locations.
